

# ORGANIZATIONAL CHANGE

November 16, 2010

Architectural Metal Systems (AMS) has recently made several strategic organizational changes that will improve their operational effectiveness and provide better service to customers.

Ron Buchholz, most recently the Manager of Manufacturing Services for ABC, has been appointed Operations Manager of AMS-Self Storage. Ron has been with American Buildings for 31 years and in manufacturing management positions for nearly 40 years. Buchholz's new position includes leadership of the AMS and Self Storage business units.

On the technical side of AMS-SS, Allen O'Steen, has moved to the position of Technical Services Supervisor. Allen's past experience as a design engineer and welding/quality assurance engineer make him a valuable contributor to the leadership team. Previously Allen worked closely with AMS in writing and maintaining ABC's industry leading warranty/roof inspection program. He has been with the ABC family for more than 12 years.

In the newly created position of Sales Manager, Martin Scroggins will provide specific focus on improving customer relationships and profitably growing sales for both AMS roofing and Self Storage. Martin has been with AMS and ABC for over 25 years and brings a wealth of sales experience to this function.

Rodney Battle will continue as the Supervisor of the Sales Service/Customer Service department.

"This new team is charged with the task of developing our operational excellence to support and grow our customer base. We are ready to create and pursue business opportunities in the current challenging economic market," said Buchholz.

Bob Smola has moved to the new Tekla Building Information Modeling (BIM) software development team. BIM is

Ron Buchholz

Allen O'Steen

Martin Scroggins

a three-dimensional modeling software designed to increase productivity and accuracy in both building design and construction. Smola's thirty-plus years of technical industry experience will prove invaluable to this critical ABC initiative.

For more than twenty five years Architectural Metal Systems has been pioneering the design, manufacture and delivery of "value added" roofing systems and self storage buildings. Headquartered in Eufaula, Ala., with manufacturing centers located throughout the U.S., AMS delivers a proven combination of products, technology and customer service for new and retrofit metal standing seam roofing systems and self storage buildings.
